A FEW THINGS TO GNAW ON

- A dam isn't a house. Beavers build dams to hold back water. They live in lodges or bank burrows, usually with underwater entrances.
- Orange teeth? That's normal! Iron strengthens the enamel of a beaver's incisors. These front teeth keep growing throughout its life.
- Splash alert! A beaver slaps its flat tail against the water to warn its family of danger.
- Little builders, big impact: Beaver dams create wetlands that provide habitat for birds, frogs, fish, and other wildlife. That makes these busy rodents important ecosystem engineers.
